To Whom It May Concern:

I am pleased to provide this letter of recommendation for Mr Robert (Matt) McCann. Mr McCann has worked under my supervision in his capacity as an undergraduate research intern from July 2010 until present. His duties have been to provide software engineering support for a high-fidelity radar point target simulator written primarily in C++. This simulator development project is a key element of ongoing research and development for a future NASA satellite project. The scale of the simulation efforts and scenarios require throughput optimization, configuration management and implementation of a regression test suite which Mr McCann has put into place. This included parallelizing the code for multi-processor architectures, establishing cross-platform operational capability and automated scripting for efficiently running differing scenarios.

Mr McCann is diligent, enthusiastic and hard working. I have been impressed with his willingness to go above and beyond in order to support deadlines or our research needs. He is interested and willing to learn and enjoys new challenges. He has strong verbal communication skills and within the context of what I have required of him (just emails, no presentations or reports), he has good written communication skills also.

Please feel free to contact me should you have any questions.

Sincerely,

Delwyn Moller,
Senior Systems Engineer
